🔗 SanketKolhe2005

Introduction

Computer Engineering student with hands-on experience in Data Analysis, SQL, Power BI, Excel, Python, and Machine Learning. Skilled in data cleaning, exploratory data analysis, dashboard development, and transforming data into actionable insights. Experienced in building data-driven solutions and analytical models to support business decision-making. .

Key Expertise

Python, SQL, Data Analysis, Exploratory Data Analysis (EDA), Power BI, Excel, Dashboard Development, Data Visualization, Business Intelligence, Data Cleaning, Data Validation, Data Preprocessing, Machine Learning, Pandas, NumPy, Feature Engineering, Model Evaluation, Scikit-learn, Communication

Education

MIT Academy Of Engineering

Jul 2026

Bachelor of Technology

- Computer Engineering
- CGPA: 8.20/10.0

Dyandeep English Medium School

Feb 2022

12th

- Science
- Score - 81.50%

Sanskar Dham Vidyalyaya

Mar 2020

10th

- Score - 90.20%

Internships

Innomatics Research Labs

09 Feb 2026– 14 May 2026

Agentic AI Intern— Computers - Software

Key Skills: Python, FastAPI, Prompt Engineering, LangChain, Retrieval-Augmented Generation (RAG), AI Agents, LangGraph, Problem Solving

- Developed Agentic AI applications using Python, FastAPI, LangChain, and LangGraph frameworks.
- Implemented Retrieval-Augmented Generation (RAG) pipelines for intelligent knowledge retrieval and context-aware AI responses.
- Built autonomous AI agents for task execution, reasoning, workflow automation, and API integration.
- Optimized prompts, backend services, and agent workflows to improve accuracy, efficiency, and user experience.

Projects

ML-Based Drone Safety Forecasting System

10 Mar 2026 – 3 Apr 2026

Key Skills: Python, Flask, Machine Learning, REST API, NumPy, Data Preprocessing, Weather Data Analysis, Drone Safety Prediction, API Integration

- Developed a ML-Based Drone Safety Forecasting System to analyze environmental conditions such as wind speed, temperature, humidity, and pressure.

- Built a Machine Learning-based prediction model in Python to determine whether drone flight conditions are safe or unsafe.
- Developed backend APIs using Flask for real-time prediction and data processing.
- Implemented validation logic, safety thresholds, and automated risk assessment for drone flight safety.
- Performed data preprocessing, feature analysis, and model integration for accurate prediction results.
- Designed a responsive interface and integrated prediction workflows to support autonomous drone decision-making.

AI-Powered Virtual Fashion Designer

10 Sep 2025 – 29 Nov 2025

Mentor: Prof. Savita Mane — Team Size: 4

[GitHub Repository](#) [🔗](#)

Key Skills: Python, TensorFlow, Autoencoders, Generative Adversarial Networks (GANs), Transformers, Diffusion Models, Computer Vision (OpenCV)

- Built a Generative AI-based system to create personalized fashion designs from text and image inputs.
- Applied Autoencoders, GANs, Transformers, and Diffusion Models for feature learning and image generation.
- Performed data preprocessing and feature extraction to improve model output quality.
- Developed an interactive interface for design comparison and result analysis.
- Applied NLP techniques with Transformers to convert text-based design descriptions into visual features.
- Explored Transformer-based architectures and Generative AI workflows for text-to-image fashion generation.

Secure Communication Using Blockchain and Cryptography

25 Sep 2024 – 10 Dec 2025

Mentor: Dr. Chetana Nemadde — Team Size: 4

Key Skills: Cryptography (RSA, AES-GCM, SHA-256), Blockchain Fundamentals, Secure Key Management, Encryption Decryption Techniques, Data Integrity Authentication, Python, Node.js, End-to-End Encryption

- Designed a secure data communication system using blockchain and cryptographic techniques.
- Implemented encryption, hashing, and key management to ensure data confidentiality and integrity.
- Verified data authenticity using SHA-256 hashing and controlled access for authorized users.
- Developed secure workflows for encrypted data transmission and blockchain-based verification.
- Documented system architecture and security protocols for reliable data protection

Certifications

Artificial Intelligence and Machine Learning

YBI Foundation

- Assisted in the design, development, and testing of machine learning models using Python.
- Worked with frameworks such as TensorFlow and PyTorch for model training and evaluation.
- Performed data cleaning, preprocessing, and basic model deployment tasks.
- Collaborated with data and research teams to support AI/ML development workflows.

Fundamentals of Deep Learning

NVIDIA

- Completed NVIDIA-certified training on deep learning fundamentals.
- Gained hands-on understanding of neural networks, backpropagation, and model training.
- Learned practical applications of deep learning using industry-standard tools.
